

URPLUS: A UNIQUE UTILIZATION REVIEW MANAGEMENT TOOL

Managing healthcare delivery to achieve high quality while keeping costs down is a challenging task. Focusing on cost is a traditional proven approach. The **URPlus** system expands this focus by introducing the knowledge of the patient's health and allowing health professionals to use the most complete information for the best results. The **URPlus** system is designed to combine high efficiency utilization review workflow with access to the most comprehensive clinical information available about the patient.

Effective utilization monitoring requires clinical knowledge and efficiency. It is essential that the medical professionals focus on the clinical aspects and minimize the time spent on administration.

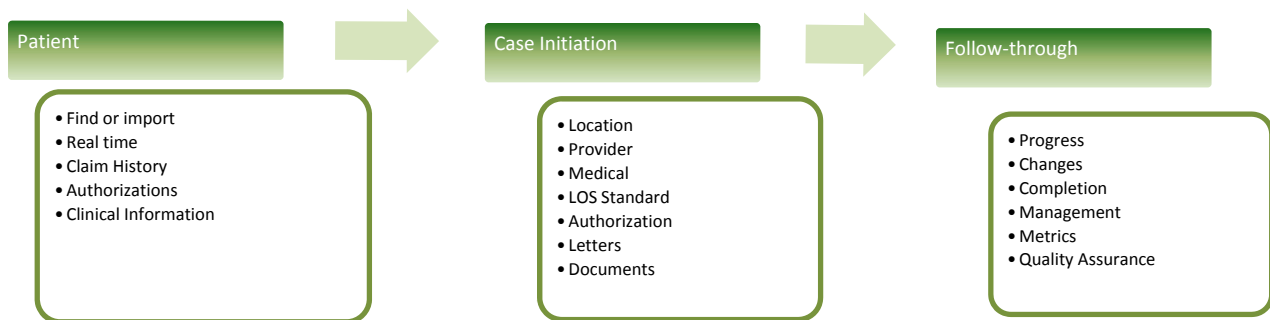

URPlus represents the new generation of utilization systems in combining the workflow engine with comprehensive clinical information.

The **URPlus** user has direct access to all information that is needed when it is needed. The unique form design shows all information required for the task and nothing that is not needed. The form re-configures depending on each particular situation.

The **URPlus** is designed to seamlessly integrate with your claim system (subject to availability of API's or a SQL access). The connectivity component of **URPlus** supports both batch and real-time integration.

Utilization review (as a much needed process) should not be complicated. At **Pragmate**, we keep it simple

The **URPlus** system database is not limited to the case management processing. It includes facilities needed to view eligibility, claims and authorizations history, and access to the clinical information about the patient. The rich functionality is accessed securely by user specific portals using consistent, familiar user interface. User with knowledge of Utilization Review requires only minimal training to be effective using **URPlus**.

URPLUS – FOCUS ON HEALTH

Healthcare organizations are aware of the Utilization Review importance. Received claim represents costs that were incurred in the past. The case processing during the utilization review represents the only opportunity to influence the health care delivery. Simple Length of Stay (LOS) tables are no longer sufficient. The **URPlus** built-in clinical information about each patient enables the reviewer to be a full partner in the process of delivering the best coordinated healthcare most efficiently.

The **URPlus** is an internet application using secure SSL access from a browser. The utilization review can be now done from hospital or any place with internet access.

URPLUS FEATURE SUMMARY

CLINICAL INFORMATION This includes patient demographic and health information. Health information includes visits, results, medications, treatment progress, allergies, and much more.	CLAIM INTEGRATION This includes an ability to integrate with the claim system for membership eligibility, authorizations, and claims.
WORKFLOW ENGINE The workflow engine allows full tracking of each case ensuring efficient and on-time reviews. The manager portal allows identifying of late reviews, transfer of one or more cases to another reviewer and full insight into case history.	INITIATION - PROGRESS Initiation of each case uses all available information entered or selected in the natural flow. The progress notes are available for each step of the process. The system maintains full audit trail of each case.
AUTHORIZATIONS The system generates correctly coded authorizations in real-time with full connectivity with the claim system. The operator has access to full authorization history.	CORRESPONDENCE The system supports multiple correspondence letters – denials, explanation of authorization changes, and ad-hoc letters generated to one or more patients or providers.
DOCUMENTS The system supports importation of multiple scanned documents associated with the case or with the patient. All correspondence is also generated in PDF format allowing easy viewing and secure access.	HEALTH RISK ASSESSMENT The health risk assessment (HRA) schedules and records vital statistics about individual patients. This process is a foundation for managing the patient care for the best outcomes.
DISEASE MONITOR The rule based process can access the claim history generating the specific patient conditions based on diagnosis codes. This helps identify patients with chronic conditions in need of consistent treatment plan.	SECURITY The system security supports full authentication methodology (expiring passwords, role based portals, and full data audit). The access to the application is secured by SSL encryption and automatic log-out after period of inactivity.

HOW MUCH DOES THIS SOLUTION COST?

URPlus software is designed as a service offering with pricing based on PMPM. This means that your organization can start using the software without a large investment in licensing or hardware. Let **Pragmate** become your partner in building a more effective healthcare organization!
