

## PE-1 Performance Measurement System

PE-1 is an enhanced productivity and utilization management tool. It is designed for operators of multi-location medical clinics, urgent care centers, occupational medicine clinics, physical therapy outpatient facilities and many other health care verticals whose business model is dependent on multiple locations. Additionally, because of PE-1's broad capabilities, it is especially valuable in a walk-in or direct access environment. PE-1 identifies which locations perform best, and makes critical determinations regarding patient workload over time. This capability increases staffing efficiency and has optimal impact on metric drivers that have a direct effect on how an organization can efficiently spend their marketing dollars.

PE-1 is a tool that works in conjunction with Raintree Systems to provide enhanced productivity and utilization management capability for the healthcare marketplace. A near real-time data load works in the background so that no additional data entry is required.

PE-1 is a web application allowing anyone with internet access and proper security to access the essential information.

### Features

- Interactive executive dashboard with clean layout and graphic presentation
- Drill-down capabilities for detail access
- Performance analysis by a clinic or by a provider
- Visits by hour, weekday, month, and other criteria
- Predictive analysis and modeling of patient visit patterns
- Compliance Defect Analysis (with QC-1 module)
- Configuration menu to customize your environment
- HIPAA compliant separate database with no personal health information
- Separate process for building the prepared statistics for fast queries
- Modern architecture allowing easy integration with practice management systems

**PE-1 completes the cycle for all your revenue cycle management needs.**

### Implementation

The PE-1 is architected using Java, JSP, and JDBC technologies allowing it to run on any Microsoft™ or Linux server with minimal footprint.
